An essential step for cannabis and hemp production

Milling is an essential step in the CBD oil extraction. With several standard sieve sizes available, the IKA CONIKA provides a simple yet reliable ability to target sizing, which is critical to the extraction process. The arrangement of the mill provides a continuous processing method for rapid dry grinding of stalk, trim, or flower.

Please contact your local IKA representative to discuss more.

You want to be flexible in your production, work efficiently, but do not want to accept quality losses? Contact us anytime.
