Vertical Electric Thermal Fluid Heater FT-050-N

Fulton's Vertical Electric thermal fluid heater features top mounted multiple low watt density elements that allow for a thermal efficiency of 96%. This is a 230/460 volt system that has a heating range of up to 650 F and will circulate the thermal fluid at a rate of 50gpm.

This is a complete skid mounted unit that comes with all the pipe-work connections for the system and a customized control cabinet set up and ready to run your process.

For additional pictures and information please feel free to call Edward Stoudenmire at 910-452-7059 ext.277 or email Ed.stoudenmire@ika.net.
